INVISIBLE SAND

EDUCATIONAL LABORATORY

Target age: 4-8 years

The **Educational Laboratory INVISIBLE SAND** begins with the representation of a geometric shape on paper.

Each participant will be presented with boxes containing different natural materials (sand, gravel, bark fragments, shells...) and industrial materials (metal fiber, colored foam, strips of transparent plastic sheets...).

Each participant* will choose the materials that more similarly recall him a known beach and coast.

The shapes drawn on paper will be filled with chosen materials. At the end of the experience, the participant is called to “read” the result: **discuss the images and motivate the choices and their meanings.**

**In the case where the materials are quite different to touch and in their shape, a variant could be to blindfold the participant*
